

## **Afghanistan Stability / COIN Dynamics**

rse. Indeed, alternative procedures may be required in non-inductive proires, too. This is shown in Fig. 7.2 (a). Finally multiple induction loops,
pleted in this sense, are shown on (c-d), eod. It will be noted that in these
ictions in (c) the small loop represents an induction that is subordinate to that
on the big loop, i.e. part of its inductive step. Similarly in (d) the two small
is that are attached to the big loop are in the same subordinate relation to it,
e the loop at the extreme right is again subordinate to the loop to which it
tached.
